Horizon Heights Website â   Resume Instructions

Follow these steps whenever you reopen Terminal to continue work:
1. Open Terminal and navigate to the project folder:
   cd ~/Desktop/HorizonHeightsWebsite
   ls
   (verify files such as horizonheightswebsite.html and assets/ are present)
2. Open a second tab or split pane for the change logs if needed:
   cd "~/Desktop/HorizonHeightsWebsite updates"
   ls
   (change 1â ƒchange N folders contain PDF summaries of prior edits)
3. When I reconnect, provide quick context by running:
   pwd
   ls -R assets | head (or tree if available) to show structure
   sed -n "1,160p" horizonheightswebsite.html (any portion you want me to review)
   sed -n "1,160p" assets/css/styles.css
   sed -n "1,160p" assets/js/main.js
   (Share any sections you are currently focused on)
4. Mention which change-detail PDFs I should read for history and any new goals.
5. If a new asset was added (e.g., video/image), note its filename and path explicitly.
6. Let me know if the environment changed (new branches, git status, etc.).
7. Once I confirm, we can continue edits from that state.

Optional quick commands before we start:
   git status   # if the repo is under git control
   open horizonheightswebsite.html # to preview in browser

All change logs remain in ~/Desktop/HorizonHeightsWebsite updates â   reference them when summar
